ABOUT ME

I am a product designer with more than five years of experience, and most of that time has been spent on software where the hard part is the logic underneath, not the screen on top. I have designed accounting systems, digital wallets, inventory tools and B2B marketplaces for small businesses and farmers across Indonesia. My first degree was in accounting, so when a product involves journals, balances or cash flow, I already understand what the numbers are supposed to do before anyone explains it to me. I work closely with engineers, write my own HTML and CSS when it helps, and I would rather sit with a user in the field than guess what they need.

WHAT I WORK WITH

Design and research: End-to-end product design, design systems, interaction design, information architecture, user interviews, moderated usability testing, wireframing, prototyping, writing PRDs

Domains I know well: Fintech and digital wallets, ERP (finance, inventory, HRIS), B2B marketplaces, logistics, accounting systems including journal entries, chart of accounts, P&L, balance sheet and cash flow

Tools: Figma (auto layout, variables, component libraries), HTML, CSS, SQL and DBeaver, Mixpanel, Maze, Adobe Creative Suite, Whimsical, Jira, Git

Working with AI: I use Claude Code, Google AI Studio, Gemini and Ollama to go from an idea to a working prototype on my own, which means I can test something real instead of waiting for engineering time

Languages: English (professional working proficiency), Indonesian (native)

EXPERIENCE

Product Designer, Independent | Client Projects

Jakarta, Indonesia · Aug 2024 to present

- Designed a full ERP suite, from double-entry journals and chart of accounts through to the reports that come out the other end: profit and loss, general ledger, balance sheet and indirect cash flow. My accounting background meant I could write the logic and the interface together instead of passing requirements back and forth.
- Rebuilt an HRIS platform across web and mobile. The old version had grown into a set of disconnected flows, so I consolidated them into one consistent system and cut task completion time by **[ISI: X%]** in post-launch testing.
- Came up with and designed “Angkot Cargo”, a feature that lets people send parcels on public minivans running fixed routes. It opened up a cheap delivery option in areas regular couriers do not reach, and now covers **[ISI: jumlah pengguna atau rute]**.
- Built a complete brand identity for a logistics client, including the logo, brand guidelines, stationery and staff ID cards.
- I hand over production-ready HTML and CSS along with the design files, which cuts down the back-and-forth about what the final build should look like.

Product Designer | Linkz Asia

Singapore, remote · Jun 2024 to Aug 2024

- Built the company’s first **design system** in Figma, a proper component library based on Material Design. It became the reference the engineering team actually used, so nobody was rebuilding the same button twice.
- Designed the **Inventory** module so people could enter data directly in the app. Before that the only way in was uploading a spreadsheet, which quietly locked out anyone who was not comfortable with Excel.
- Worked out the tax and discount calculations for the Order Form and designed them to update live as you type, so users could see the final amount immediately. That removed a recurring source of billing arguments.
- Ran interviews with active users over video, walked them through the product, and turned what I heard into design changes that shipped the same quarter.
- Wrote the Jira tickets and design specs for developer handoff across everything running at the time.

Product Designer | PasarMIKRO

Jakarta, Indonesia · Aug 2021 to Jun 2024 · B2B agritech marketplace and fintech platform

- I was the only designer across four product lines on a platform used by **[ISI: jumlah pengguna atau GMV]** traders and smallholder farmers, which meant I owned the research, the design, the design system and the QA at the end.
- Business Wallet.** Users kept their sales money and their purchasing money in one wallet and could never tell what they had actually earned. It was our most complained-about issue. I split it into two balances so earnings were visible before withdrawal, and engagement with the wallet went up by **[ISI: X%]**.

- **Cash Flow Record.** The old financial report was a dense table nobody opened. I rebuilt it around bar charts with a simple way to log income and expenses by hand, and people started coming back to it regularly, up **[ISI: X%]**.
- **B2B Marketplace.** Traders wanted to work with people they trusted but also needed to find new suppliers. I gave each user a storefront with a visible transaction history, a way to save partners they liked, and a WhatsApp path so a new partner could make a deal without installing anything. That last part removed the biggest drop-off in partner acquisition.
- **Area Tracking.** Farmers had no reliable record of how big their land was. I designed a GPS tool that measures the area as they walk or drive around the edge of it, and the result doubles as proof of origin when they sell.
- Did the field research myself, travelling to rural sites and sitting with users who were not confident with smartphones. A lot of what I learned there ended up directly in the product.
- Ran moderated usability tests and queried the behaviour data myself in Mixpanel and SQL, so design decisions were checked against what people actually did rather than what we assumed.

Graphic Design Intern | **Sinarmas Land**

Tangerang, Indonesia · Feb 2021 to May 2021

- Produced video and print material for the company e-learning platform and helped with the website UI, where my proposal for a simpler navigation structure was adopted.

EDUCATION AND CERTIFICATION

Professional Certificate, Digital Design, International Design School, Jakarta, Indonesia

2019 to 2021 · GPA 3.44 / 4.00

Bachelor of Economics (S.E.), Accounting, Maranatha Christian University, Bandung, Indonesia

2014 to 2018 · GPA 3.41 / 4.00 · The reason I am comfortable designing ERP, accounting and wallet products

Google UX Design Professional Certificate, Coursera

UX foundations, empathise define and ideate, wireframing and low-fidelity prototyping, UX research and concept testing

VOLUNTEER

Lead Designer, LitUp Indonesia, an education non-profit

Oct 2020 to Jul 2022 · Bandung, Indonesia

- Led the media team and set up the content strategy and production process for an education outreach programme aimed at students, growing our reach on Instagram and TikTok.
